The Door-Stop Difference
Composite Door

Behind that rather scientific-sounding name, you’ll find the latest technology and design in doors. And when you’re indoors you’ll enjoy loads of style, strength and security.

Let’s get personal now. How your door looks is up to you. Like traditional-style or contemporary? You can choose from twenty styles in seven colours. Keep looking – we’ve got three finishes of door furniture and a beautiful range of glass too.

We like to keep our technicians busy. And you safe. So we’ve tested our doors to the very limit. Against extreme weather, extreme attack – and extremely over-enthusiastic visitors. And wannabe burglars are going to hate all those high-tech security features.

All the information in this book is provided for guidance only and is given in good faith, but without warranty or guarantee of any kind, whether implied or expressed.
Don’t compromise... go composite

We don’t believe in compromising on quality.

We’ve brought together materials to give you the very best in strength, easy maintenance, security, and weather resistance. Oh – and great looks as well.

Our composite door is thick – but it’s also very smart. In fact it’s 44mm thick (compare that to conventional pvc panel doors at 28mm). And powerful too, thanks to its super-strong structure.

A structural frame and up-to-the-minute hardware makes our composite door even more secure. Its GRP finish means you’ll be secure in all weathers. And enjoying great looks for years to come.
What is the difference?

Boast a timber grain effect

Someone clever once said that quality is in the detail. So what does that tell us about plain, white polystyrene-filled panel doors? The timber effect grain of one of our doors gives a rich, classic style to your house – and a very warm welcome home. Now that is clever.

Don’t discolour with time

“I’d like a bright white door now, and then I would like it to go a kind of tired mustard, off brown colour after a couple of years” has never been asked for but often given with PVC panel doors. The GRP skins mean you will keep the colour you originally asked for.

Darkwood colour

The new woodgrain door is really GRP....honestly! After months of development our two tone ‘Dark Wood’ door complements both mahogany or a cherrywood foil frame. This woodgrain door is guaranteed to give this unique ‘is it real’ look for a decade.
Solid framed and 1.7 inches thick

What’s in a door? Well, as you can see, there’s not very much at all between you and the outside world with a conventional PVC panel door. Our doors have a solid edge – to help keep you and your castle super-secure.

Don’t rely on visible gasket seals

I’ve always dreamt of having a white front door with unattractive black rubber rings around it.” If that’s the look you want for your home exterior – help yourself to a conventional white PVC door. Prefer great looks with the technical bits tucked away?
- “I’d love a Composite Door please.”

Available in a variety of colours

Would you like your living room or your kitchen to look the same as everyone else’s? We thought not. But with PVC panel doors this limited choice comes as standard for the exterior of your home. Express your style with our wide selection of colour options.
Security is... being able to relax. Knowing your home is protected by a lock with a reputation built up through one hundred years of manufacturing and trusted in more than 120 countries across the world. Every Door-Stop door comes with Yale locks, keys and furniture. For added peace of mind, whether you’re at home or not.

67% of burglars break in through THE DOOR

Police Approved

If anyone knows about security, it’s the Police. Our Secured by Design upgrade meets their national standard for safer homes. It’s not only Police-approved - it’s recognised by many insurance companies. So as well as enjoying an added sense of safety, you could get a discount on your home insurance cover, too.
Extra security: Safe as houses

Anti-Bump
Anti-Pick
Anti-Drill
Anti-Snap
Anti-Extraction

Inside and out, our doors are made to the highest standard. We’re the only manufacturer to fit the Kitemarked Yale locking system on every door we make. You can relax, knowing your home is protected from burglars targeting the average lock.

Our locks feature a cylinder which is impossible to bump or break. All tested to the latest BS EN 1303:2005 security standards, recognised as a security asset by insurance companies.
Test for the best

We don’t think creating our composite door is only about choosing the best quality materials.

Or including the highest standard features.

Or providing beautiful decorative fittings.

We think creating a truly great front door is about putting our ideas to the test. Again and again. Under strict scientific conditions.

So we spend a lot of time thinking about what your door goes through. We haven’t quite written its life story - but we have thought about the wear and tear it puts up with all day, every day. The bangs, the knocks and the day the new sofa got stuck.

And because we know not every admirer of your home has good intentions we asked the BSI to pretend to be burglars. Short of dressing up with stripy jumper and swag bag, they try the security of your door with crow bars, sledge hammers, credit cards and other tools of destruction. Then they swing a 30 kg ball into the door in nine different places to check it will stand up to shoulder barge.

We’ve tested the security and durability of our composite door again and again.

Our lock got the Kitemark - so you’ll give it top marks.
Electronic door bell/viewer

It’s good to know who’s on your doorstep. With the electronic door viewer from security specialists, Yale and you’ll see exactly who’s calling, day or night. Stay protected from the unexpected with live images of visitors at the front door and an easy-to-see internal screen. The viewer even saves time stamped images of people who call when you’re out!

**Features**
- View live images of who is at the door
- Built in L.E.D. for assisted night viewing
- Images stored on optional SD memory card
- Date and time stamp, so you see when visitors called
- Includes long-life rechargeable battery & charger
- Simple installation
- Robust, weather resistant metal construction
- Wide 90 degree viewing angle
- Yale installation helpline available
What happens when you combine Door-Stop’s door manufacturing expertise with the know-how of world famous lock makers, Yale? You get an exclusive asset to your home security.

Welcome to the Keyfree electronic lock from Yale, available only from Door-Stop. It’s the first lock from Yale that allows you to access your home using a personalised PIN code or remote fob. Every single feature has been designed to make life easier – and maintain your security to the standard you expect from Door-Stop.

Hands full at home? All our expertise has gone into making the lock hands free and hassle free. So you get exceptional convenience without compromise to your security.
Wirefree alarm for better protection

Every feature of the Keyfree electronic lock has Yale’s specialist security knowledge built in. Not only will the lock’s 80-decibel alarm sound if the handle detects vandalism or damage, but the system is also an independently powered unit. So there are no wires, no complicated set up - and no need to call an electrician in an emergency! And even without power, you have two fail-safe entry methods. Not surprising for a product from the makers of the world’s favourite lock.

A higher standard of security

Inside or out, Yale Key-Free puts you in control. Leaving the house or coming home? The lock automatically latches every single time, keeping your home completely secure. When you do want to go out, all you have to do is turn the handle to unlock your door. You could call that smart. We call it simple - the easy answer to exceptional home security.

Features
- Remote access
- Multi PIN user
- Wirefree (no need to call an electrician)
- Built in 80 decibel tamper alarm
- Automatic latching
- Two failsafe options
BSI boot camp for doors

It’s not a temple.

Yes, your new door does look beautiful, but it also has to live your life. If you were going to interview a door for the job you’d probably ask whether it had experience in coping with regular scrapes, knocks and bangs, if it was fully safety and security accredited – and most importantly, whether it was prepared for trial by small child.

OK – we don’t organise job interviews or X Factor-style auditions for our inward opening doors. That would just be strange. But we do the next best thing with the support of the most exacting people out there, the British Standards Institution.

Call it boot camp for doors. They don’t shout at the doors until they cry, but they do demand to know ‘Are you fit for purpose?’ in their BS6375 test. That involves opening and closing the door 50,000 times – because they’re obsessed with the quality of those hinges. And making sure you can use your door for years - and years - to come.

They think of all the ways your door could be tested and tricked in its career in your home. And then they put them into action. Like checking if your door will open with a child swinging from the handle (minus the real child in the tests, of course). Or placing a toy in the way of the door to see how it copes under pressure.

But boot camp’s only just begun. Those strict BSI people do full weather testing. And security testing. And more security testing (PAS024). Because they’re particularly obsessive, they test every feature of the door.

At the end of boot camp, your door is awarded with one of the BSI’s highest accolades, a BS6375 & PAS024 award. That proves your door is ready to live your life – and keep you safe and secure.

Going for an upgrade to flag hinges? This one earns a BSI Kitemark after withstanding all the same demanding BS6375 and PAS024 tests. No marching orders - just a door that’s ready for action.
Showers...storms...drizzle...We hate to break it to you, but the average rainfall in the UK is between 700mm a year in East Anglia and 3,000mm a year in the Scottish Highlands*.

That’s a lot of potential for leaks, puddles or even worse.

But we’ve designed our doors to withstand even the heaviest downpour.

The doors are tested by the BSI by spraying six litres of water every minute directly at the door in their test chamber. That’s a serious amount of rain.

So even when it’s cats and dogs out there, your door will keep you snug and dry.

---

**Watertightness:** Tested in accordance with BSEN 1024: 2000

**Air permeability:** Tested in accordance with BSEN 1026: 2000

**Wind resistance:** Tested in accordance with BSEN 1221: 2000

*Meteorological Office Statistics*
We can’t tell you what’s going to happen next. But we can make sure your door is fully protected against extreme weather conditions. Our doors are tested in a pressurised chamber to simulate gusting winds. The tests start at 500 Pascal – 63 miles an hour. Then the BSI turned those gusts up to the equivalent of 80 miles an hour (800 Pascal). That’s stronger than a hurricane.

But we weren’t quite content with that though. Because we want our doors to be fully prepared - like the Boy Scouts. So we took our in house test rig to over 100 miles an hour. The door remained unchanged!

We’re not psychic. But we can predict your composite door will keep you protected in all weathers.
Over the threshold

A door is much more than just a door.

It’s the entrance to your own castle - minus the moat and drawbridge. It’s your threshold to peace and quiet - or fun and frolics. It’s a very welcome sign that the day is over and it’s time to switch off.

We want to make sure you can get into your castle as easily and safely as possible. So we’ve designed our door with a very little step. That means easy access to your pad.

And once you’re on the sofa, with the remote control safely in your hand, you’ll stay cosy. Because our door’s smart thermal break feature will stop the cold getting into your castle.

Available in three colours: gold, chrome and black.

Part M compliant
Don’t replace, reglaze

Life is full of surprises.

Like your other half suddenly hankering for a new look front door.

Or the glass in your door getting broken in the neighbours’ kids’ weekend ballgame.

But you can be sure that with our patented reglazable cassette system changing the glass does not mean replacing the door, for whatever reason.

We’ve made it easy to reglaze without any impact on the door or the cassette. In the event of the unexpected, the glass units simply break down and go misty. So no drama, no fuss and no brand new door required.

Our cassette is also colour injection moulded to match your door – and fully accredited to tough BS:EN 6375 and PAS24 security standards.

Keeping your door safe and stylish. Whatever life throws at it.
Letterplate:
Postie’s choice

Think of the biggest, fattest Sunday paper.

You know – the one that’s giving your paperboy biceps.

It’s no match for our top of the range letter plate. Its super-strong frame and flap are both solid dye cast metal. The nylon brush inside stops the drafts and we seal your letter plate twice to make sure it will stand up to any wind and rain.

The flap is fully sprung loaded - so it closes perfectly every time. And it opens to 180 degrees. Which means even big packets and your favourite Sunday paper will post through easily.

The postman won’t ever need to ring.

Salt Spay tested to 240 hours
Eco-Friendly

We’ve always been ahead when it comes to taking responsibility for the planet.

From day one we chose to use a calcium zinc based compound in the extrusion of the door frame (which we make in different lengths to avoid waste) because it’s much kinder to the planet than lead based additives.

The door’s inner rigid foam system is completely, utterly, one hundred percent CFC-free.

Carbon footprint

And we’ve taken big steps to reduce our own carbon footprint too. Door-Stop doors are made right here in the UK, unlike the products of other door companies. And we carefully plan and all our delivery routes to cut down the amount of fuel we use.

Other manufacturers look at our doors and go green with envy - we’re just greener.
Your door, your U value

Imagine if you could see how great your Door-Stop door was at saving you energy. Now you can.

Door-Stop doors can be ordered with a certificate showing you its individual U value - based on expert data from the Build Research Establishment.

You get the reassurance of knowing your door meets tough new government standards (effective October 2010) as well as proof of how well your door performs at keeping the heat in your home and saving you money on your energy bills.

Information from HAPM (Housing Association Provident Mutual) and BRE (Building Research Establishment)
Your own work of art

What’s your favourite colour? We know you’ll have a preferred hue, whether it’s extrovert red, calming blue or tranquil green.

Whatever it is, a touch of the bright stuff can help bring your home to life.

And now you can add a splash of colour to your composite door, too.

Like the sound of three drop diamond in blue, red and green? Tempted by our Italian chic Fusion Art range? How about a traditional entrance to your home with English Rose - or perhaps a touch of Art Nouveau with Fleur or Mackintosh Rose?
Something lovely

You know how you feel when you see something lovely? Like a sunset, or children playing – or a picture of your favourite Hollywood heart throb?

You’re going to get that feeling every day with our brass and zinc door art.

The glass is handcrafted using traditional techniques. And like the aforementioned superstars, we demand only the very best. That means our door art is created with cut glass held in strips of real zinc or brass.

It's eco-friendly too. We surround the finished piece of art in an insulated glass unit to make a triple glazed unit. The reduction in heat loss makes it the most energy efficient choice of glass. And because the detail is safely surrounded by glass, it’s easy to clean.

With one side made of laminated glass, our door art easily passes the strictest security tests.
